
TraxFast™ 34

Government Asset Tracking System

The Problem – Untracked Assets

Today and into the future, information is power. Time is money. You need to know exactly what you have, and accurately track it for depreciation, budgeting, and other important factors. Lost, stolen, or misplaced assets can mean the difference between success and failure. Until now, it has been extremely difficult to accurately track assets.

The Solution: **TraxFast 34**

TraxFast 34 sets a new, demanding standard for tracking and maintaining assets. Now you and your staff can track and manage assets and inventory items with an ease and accuracy never before possible.

Barcoding Technology

TraxFast 34 uses the most advanced barcode technology available to give you unprecedented control over your physical assets. The handheld computer (PDA) which is also a barcode reader immediately updates the computer with valuable information about the quantity, location, etc., of your assets. This system also uses a portable barcode printer to generate barcode labels during tagging.

If an item is not tagged during inventory, the operator can enter it and print a barcode label.

Open Architecture

TraxFast 34 has an open architecture design enabling you to use it as a front end for any host system database, including IBM, Hewlett-Packard, DEC or PC-based systems. Your database will operate, as a relational database with **TraxFast 34**, even if your host database is not relational. Or, you can use **TraxFast 34** as a stand-alone product. TraxFast34 can run on an IBM compatible computer under the Windows operating system. That means that the **TraxFast 34** PC can be used for other operations.

Get on Track with **TraxFast 34**

The features that make it ideal for asset tracking also lend themselves to real-time or batch inventory control applications. **TraxFast 34** can report and tag as a single operation. Personnel time is reduced and your facilities manager can provide better service at reduced overhead. **TraxFast 34** lets you use your present tagging system to enter and print tags. It also tracks and reports dimensions for architectural purposes, depreciation (insurance) and weight (shipping).

The **TraxFast 34** System in a Batch Environment

TraxFast 34 uses barcodes to track your assets with pinpoint accuracy. The PDA prompts for data needed about items. The attached scanner is used to scan information about products or items from a worksheet. As items are scanned, they are collected for downloading to the host database at the end of the day. The portable barcode printer generates barcode labels for each room or area, and for each item within (if you have a tagging system in place, you can generate barcode labels to conform with it).

TraxFast 34 Results

When data has been entered into the **TraxFast 34** database, you use the software to report it. **TraxFast 34** reports deliver true state-of-the-art data collection, detailing location, status and other pertinent data. Reports can be department wide, or building specific.

<p>In addition, you can customize reports to any field in the database. So you can report on depreciation, loss or other useful information. You can even use TraxFast 34 as a front end for tax depreciation packages.</p> <p>TraxFast 34 runs under the Windows operating system on any IBM compatible computer 486 or faster, you can use the TraxFast 34 machine to run other software.</p> <p>Because the Windows environment is graphic, mouse-driven and windowed, the TraxFast 34 software is extremely user friendly. You and your staff will require little or no training to tap the program's capabilities.</p> <p>TraxFast 34's power and flexibility lend themselves to applications far beyond asset and inventory tracking. Whether you use it to track machinery in a state, or furniture in an office building, TraxFast 34 has what it takes to achieve and retain control of any group of items whose maintenance is important to your organization's bottom line.</p> <p>Some of the Major Companies using the TraxFast 34 Asset Tracking System:</p> <p>Universal Studios – Hollywood Alesis Studio Electronics US West AT&T Martin Marietta Mutual Of Omaha Johnson Controls Pioneer Standard Newbury Township</p>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; padding: 5px;">FEATURE</th> <th style="text-align: left; padding: 5px;">BENEFIT</th> </tr> </thead> <tbody> <tr> <td style="padding: 5px;">Barcode Technology</td> <td style="padding: 5px;">Reads and prints barcode labels to deliver accuracy and productivity</td> </tr> <tr> <td style="padding: 5px;">Open architecture design</td> <td style="padding: 5px;">Can be used as a front end for virtually any existing database on a PC, minicomputer, or mainframe.
